FOR PRE AND POSTPARTUM COWS

PRODUCT DESCRIPTION:

Designed for both pre and postpartum cows, and is the best tool you can use to help your cows avoid many of the pitfalls associated with the stress of calving and an immediate high production demand. When a smooth transition is accomplished with no problems at freshening, intake can be optimized resulting in higher milk yield, and improved reproduction and health.

KEY BENEFITS:

- Provides a high concentration of readily available energy
- Helps in prevention of ketosis
- Helps accelerate appetite, feed intake, and start-up milk yield
- Bolsters immunity during periods of transition stress

DIRECTIONS FOR USE:

Feed per head daily:

PRE-CALVING: Feed 8oz. (227g) for 5-7 days pre-calving

POST-CALVING: Feed 1lb. (454g) for 5-7 days for ketosis prevention

For Drench Administration in the treatment of clinical ketosis:

Mix 1lb. (454g) of PowerPunch with 5 gallons warm water and administer orally as soon as possible after calving with a drench gun. Hold the head of the cow in a slightly elevated position and carefully place the nozzle into the back of the mouth between the cheek and teeth. Administer the drench slowly to permit ease of swallowing and do not give to cows that are unable to swallow. Repeat again 6-12 hours later or as needed.

STORAGE RECOMMENDATION:

Store in a cool location.

AVAILABLE SIZES:

25lb Bucket (400 oz.)

10lb Bucket (160 oz.)
